

III. Getting Things Done

- Locate and use 2 or 3 pieces of information from moderately complex formatted texts (such as maps, course calendars, directories or website navigation menus).

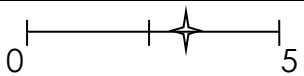

Task Read real estate listing to determine suitability for a family's requirements.

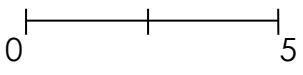

Tool Scale

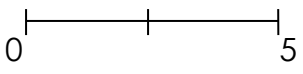

The scale tool in the example can be adapted for problem-solving type activities in which Ss need to find a suitable match between given criteria and available options (e.g., selecting a vacation package, choosing a leisure activity, finding an appropriate bank account).

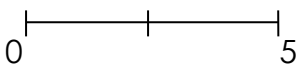

1. Review target language for the topic of purchasing a house, especially language likely to be encountered in Multiple Listing Service (MLS) listings.
2. Provide Ss with a list of requirements for a specific family: none of the listings explicitly match the requirements but the requirements should be similar, like a list a realtor might give when searching what is on the market.
3. Post the listings around the room.
4. Have the Ss read each of the listings and choose the one they think fits their "family" best. Have them provide the reasons for their choice
5. Indicate on the scale how well they made their choice. Provide some feedback and specific comments for improvement.
